

Learning more about recycling, waste and recovering heat and power

We are proposing to build a Visitors' Centre called EcoPark House. From here, we will continue to offer pre-arranged EcoPark tours, including a safe and interesting route around the site and give everyone a chance to see how we will generate heat and power from waste left over after recycling.

We are also proposing to relocate the Sea Cadets into EcoPark House, once the project is built. The Sea Cadets currently meet at the wharf on the River Lee Navigation and use the building there. Further community use will also be possible. Based in Edmonton since 1942, the Sea Cadets' purpose is to celebrate Britain's maritime heritage and contribute to its future development by supporting young people.

Question 9: What are your views on our proposals for a Visitors' Centre?

You can answer this question online or in a Feedback Form.

Edmonton Sea Cadets

Indicative view of EcoPark House from the River Lee Navigation
